

Kindred Asterling AI Coaching — Replit Agent Blueprint

Unified Site Consolidation + Square Payment Integration

Overview

This document is a full set of instructions for the Replit agent working on the `kindred-asterling-ai-coaching.com` project. The goal is:

- 1. **Consolidate** the content from `kindredinsightshub.space` (the knowledge base / promotional site) into the main app domain `kindred-asterling-ai-coaching.com` — one unified site
- 2. **Wire up Square payments** with the existing yearly and lifetime product catalog
- 3. **Retire** `kindredinsightshub.space` — all content moves to the main domain

The project is a **pnpm monorepo** using **Next.js App Router** (assumed) for the `kindred-coach` web frontend and a separate `api-server` backend. All changes below target the `kindred-coach` app unless otherwise noted.

Architecture Overview

kindred-asterling-ai-coaching.com	
└─ / (root)	→ Public marketing landing page (NEW — migrated from insights)
└─ /about	→ About the project + creator (NEW)
└─ /science	→ The neuroscience framework (NEW)
└─ /pricing	→ Pricing page with Square checkout (NEW)
└─ /app	→ Protected area (existing app — no changes to core logic)
└─ /app/begin	→ Morning check-in module (existing)
└─ /app/throughout	→ Throughout-the-day module (existing)
└─ /app/close	→ End-of-day reflection (existing)
└─ /app/...	→ All other existing modules
└─ /api/square/checkout	→ Square payment API route (NEW — see Section 4)
└─ /api/square/webhook	→ Square webhook handler (NEW — see Section 4)

Section 1 — New Public Pages to Create

The following pages must be created as **public-facing routes** (no auth required). They contain migrated content from `kindredinsightshub.space`. Use the existing design system and component library already present in the project.

1A — Landing Page (/ root)

Replace or augment the current root page with a full marketing landing page. The page should have the following sections **in order**:

Hero Section

- **Headline:** "Where neuroscience meets compassion."
- **Subheadline:** "Kindred is an AI companion grounded in cognitive neuroscience, mental health research, and addiction science — a transparent, regulated presence that serves human connection, never replaces it."
- **CTA Buttons:** "Start Free Trial" (links to `/pricing`) and "Learn More" (smooth scrolls to the science section)

What Is Kindred Section

- **Heading:** "Not a chatbot. A companion."
- **Body:** "At the heart of the app is Kindred — born from genuine curiosity about the human brain, why we get stuck, why we reach for escape, and how we find our way back. We believe AI should be a transparent, compassionate supplement to human care. It helps us identify patterns, reflect our progress, and gently guide us back to our intentions. But it must never pretend to be human."

The Framework Section

Three columns or cards representing the app's daily rhythm:

Module	Description
Begin	An intentional opening to the day — mood, sleep quality, what's on the mind, and a single grounding intention before the noise begins.
Throughout	An ongoing conversation with Kindred — informed by your check-ins, your medications, your patterns, and the language you've used before.
Close	A reflective end-of-day pass — what worked, what didn't, what tomorrow needs. The brain consolidates what it rehearses.

Features Grid Section

Eight feature cards:

1. **Medication Tracker** — A respectful, honest tracker for psychiatric medications. Adherence and side-effects belong in the same conversation as everything else.
2. **Behavior Tracking** — Small, repeated actions tracked without shame — to give the brain something new to rehearse.
3. **Self-Assessments** — Brief, structured assessments grounded in DBT and CBT practice. Body scans, mood scans, urge scans.

- 4. **Progress View** — A longitudinal view of the work. Patterns emerge across weeks that no single day reveals.
- 5. **Journal** — Past check-ins, conversations, and reflections — held with care.
- 6. **Profile** — Name, birthday, interests, strengths, and what you're currently working on.
- 7. **Customization** — Themes, language, the name you'd like to be called. Recovery is intimate work; the environment should respect that.
- 8. **AI Companion** — Kindred is informed by your patterns and the language you've used before — not a generic profile from a market study.

Principles Section

Three principle cards:

- **Principle 1 — Radical Transparency:** The AI is named as AI. Its limits are stated, not hidden. Every suggestion is questionable, and questions are welcome.
- **Principle 2 — Deep Personalization:** Built around your name, your medications, your strengths, your edges — not a generic user profile.
- **Principle 3 — Complement, Not Replace:** Kindred is a companion to clinical care, peer support, and human relationship — not a replacement for any of them.

CTA/ Waitlist Section

- **Heading:** "Join the pilot."
- **Body:** "No promises, no spam. Just an invitation to follow the pilot and explore the intersection of AI and human resilience together."
- Email signup form (connect to existing newsletter logic if present, otherwise a simple POST to `/api/waitlist`)
- Button: "Get Early Access" (links to `/pricing`)

1B — Science Page (`/science`)

Create a dedicated page presenting the neuroscience foundation of Kindred.

Hero

- **Heading:** "Kindred is anchored in peer-reviewed science."
- **Subheading:** "We approach the mind with intellectual respect, drawing from cognitive neuroscience, addiction science, and behavioral health."

Research Pillars — Four sections:

1. Marc Lewis — Addiction as Deep Learning

Marc Lewis's argument: addiction is not pathology but deep learning. The brain's capacity to rewire itself is also the path to recovery.

2. Kevin McCauley — Hijacked Reward Circuits

Kevin McCauley's work: how addiction hijacks the reward, memory, and stress circuits; how hypofrontality compromises choice and insight.

3. Judith Grisel — The Neurological Cycle

Judith Grisel's neurological cycle: the brain's homeostatic rebound creates withdrawal, trapping people in a search for normalcy.

4. The ACE Framework

The interplay of Adverse Childhood Experiences, genetics, and environment in shaping the hedonic system.

Therapeutic Foundation Section

- **Heading:** "Evidence-Based Techniques"
- **Body:** "Recovery as a process of reorganizing habits through social support and self-directed growth. Evidence-based therapeutic techniques — including DBT and CBT — are woven into the coaching framework to build distress tolerance and emotional regulation."

AI Ethics Section

- **Heading:** "The ethical landscape"
- **Body:** "AI can identify patterns and personalize support, but lacks emotional nuance. Human connection remains essential. Kindred is designed with this boundary clearly in mind."

1C — About Page (/about)

The Mission Section

- **Heading:** "We are living through a behavioral health crisis."
- **Body:** "Marked by a profound treatment gap, traditional care is often inaccessible, expensive, or deeply stigmatizing. People are left to navigate the darkest parts of their minds alone. A thoughtfully designed AI coach cannot replace a therapist, a sponsor, or a friend. But Kindred can be there at 2:00 AM when the craving hits. It can hold space without judgment. It can map patterns over months, offering insights that a tired human mind might miss."

About the Creator Section

- **Body:** "This project began as curiosity. I study cognitive neuroscience, mental health, and addiction — and I believe the tools we build shape the conversations we have. Kindred is a pilot — a question, not an answer. I'm building it to see where it leads, and to invite others to think alongside me."

1D — Pricing Page (/pricing)

This is the key commercial page. It must display both Square products clearly.

Page Layout

- **Heading:** "Simple, honest pricing."
- **Subheading:** "One product. Two ways to commit."

Two Pricing Cards

Card 1 — Yearly Plan

- Badge: "Most Popular"
- Price: [Pull from Square catalog — insert your yearly price here]
- Billing: "Billed annually"
- Feature list (use checkmarks):
 - Full access to all Kindred modules
 - Daily Begin, Throughout & Close sessions
 - AI companion conversations
 - Medication + behavior tracking
 - Progress analytics
 - Priority support
- CTA Button: "Get Started — Yearly" → triggers Square checkout (see Section 4)

Card 2 — Lifetime Access

- Badge: "Best Value"
- Price: [Pull from Square catalog — insert your lifetime price here]
- Billing: "One-time payment, forever"
- Same feature list as above, plus:
 - All future updates included
 - Founding member status
- CTA Button: "Get Lifetime Access" → triggers Square checkout (see Section 4)

Trust signals below cards:

- "Secure payment via Square"
 - "Cancel anytime (yearly plan)"
 - "30-day satisfaction guarantee"
-

Section 2 — Navigation Updates

Update the site's main navigation to include the new public pages. Suggested nav structure:

- **Logo** → links to `/`
- **Science** → links to `/science`
- **About** → links to `/about`
- **Pricing** → links to `/pricing`
- **Sign In** → links to existing auth/login route
- **Get Started** → links to `/pricing` (primary CTA, styled as button)

On mobile, collapse into a hamburger menu. The "Get Started" button should always remain visible.

Section 3 — Environment Variables Required

Add the following environment variables to the Replit Secrets panel. **Do not hardcode these values in any file.**

```
# Square Payment Integration
SQUARE_ACCESS_TOKEN=your_square_access_token_here
SQUARE_APPLICATION_ID=your_square_application_id_here
SQUARE_LOCATION_ID=your_square_location_id_here
SQUARE_WEBHOOK_SIGNATURE_KEY=your_square_webhook_signature_key_here

# Square Product Catalog IDs (copy from your Square dashboard → Catalog)
SQUARE_YEARLY_VARIATION_ID=your_yearly_product_variation_id_here
SQUARE_LIFETIME_VARIATION_ID=your_lifetime_product_variation_id_here

# App URL (used for Square redirect and webhook)
NEXT_PUBLIC_APP_URL=https://kindred-asterling-ai-coaching.com
```

How to find these values in Square Dashboard:

1. **Access Token + Application ID:** Square Developer Portal → Your App → Credentials tab
2. **Location ID:** Square Dashboard → Account & Settings → Locations
3. **Webhook Signature Key:** Square Developer Portal → Your App → Webhooks → create endpoint → copy signature key
4. **Variation IDs:** Square Dashboard → Items & Orders → Items → click each product → copy the Variation ID

Section 4 — Square Payment API Routes

Create the following two API routes inside the `kindred-coach` Next.js app.

4A — Checkout Route: `app/api/square/checkout/route.ts`

```
import { Client, Environment } from 'squareup';
import { NextRequest, NextResponse } from 'next/server';
import { randomUUID } from 'crypto';

const client = new Client({
  accessToken: process.env.SQUARE_ACCESS_TOKEN!,
  environment: Environment.Production, // Change to Environment.Sandbox for testing
});

export async function POST(request: NextRequest) {
  try {
    const { planType } = await request.json();

    // Map planType to Square catalog variation ID
    const variationId =
      planType === 'yearly'
        ? process.env.SQUARE_YEARLY_VARIATION_ID!
        : process.env.SQUARE_LIFETIME_VARIATION_ID!;

    const { checkoutApi } = client;

    const response = await checkoutApi.createPaymentLink({
      idempotencyKey: randomUUID(),
      order: {
        locationId: process.env.SQUARE_LOCATION_ID!,
        lineItems: [
          {
            quantity: '1',
            catalogObjectId: variationId,
          },
        ],
      },
      checkoutOptions: {
        redirectUrl: `${process.env.NEXT_PUBLIC_APP_URL}/payment-success`,
        askForShippingAddress: false,
      },
    });

    if (response.result.paymentLink?.url) {
      return NextResponse.json({
        checkoutUrl: response.result.paymentLink.url,
      });
    }

    return NextResponse.json(
      { error: 'Failed to create checkout link' },
      { status: 500 }
    );
  }
}
```

```
    );  
  } catch (error) {  
    console.error('Square checkout error:', error);  
    return NextResponse.json(  
      { error: 'Internal server error' },  
      { status: 500 }  
    );  
  }  
}
```

4B — Webhook Route: `app/api/square/webhook/route.ts`

```

import { Client, Environment, WebhooksHelper } from 'squareup';
import { NextRequest, NextResponse } from 'next/server';

const client = new Client({
  accessToken: process.env.SQUARE_ACCESS_TOKEN!,
  environment: Environment.Production,
});

export async function POST(request: NextRequest) {
  const body = await request.text();
  const signature = request.headers.get('x-square-hmacsha256-signature') || '';
  const webhookUrl = `${process.env.NEXT_PUBLIC_APP_URL}/api/square/webhook`;

  // Verify the webhook signature
  const isValid = WebhooksHelper.isValidWebhookEventSignature(
    body,
    signature,
    process.env.SQUARE_WEBHOOK_SIGNATURE_KEY!,
    webhookUrl
  );

  if (!isValid) {
    return NextResponse.json({ error: 'Invalid signature' }, { status: 401 });
  }

  const event = JSON.parse(body);

  // Handle successful payment
  if (event.type === 'payment.completed') {
    const payment = event.data?.object?.payment;

    if (payment) {
      // TODO: Update user's subscription status in your database
      // Example: await db.updateUserSubscription(payment.buyerEmailAddress, 'active');
      console.log('Payment completed:', payment.id);
    }
  }

  return NextResponse.json({ received: true });
}

```

4C — Install Square SDK

Run this command in the `kindred-coach` package directory:

```
pnpm add squareup
```

4D — Checkout Button Component: `components/CheckoutButton.tsx`

```

'use client';

import { useState } from 'react';

interface CheckoutButtonProps {
  planType: 'yearly' | 'lifetime';
  label: string;
  className?: string;
}

export function CheckoutButton({ planType, label, className }: CheckoutButtonProps) {
  const [loading, setLoading] = useState(false);
  const [error, setError] = useState<string | null>(null);

  const handleCheckout = async () => {
    setLoading(true);
    setError(null);

    try {
      const response = await fetch('/api/square/checkout', {
        method: 'POST',
        headers: { 'Content-Type': 'application/json' },
        body: JSON.stringify({ planType }),
      });

      const data = await response.json();

      if (data.checkoutUrl) {
        window.location.href = data.checkoutUrl;
      } else {
        setError('Unable to start checkout. Please try again.');
```

```
    </div>
  );
}
```

Use this component on the `/pricing` page like this:

```
<CheckoutButton
  planType="yearly"
  label="Get Started – Yearly"
  className="your-existing-button-styles"
/>

<CheckoutButton
  planType="lifetime"
  label="Get Lifetime Access"
  className="your-existing-button-styles"
/>
```

Section 5 — Payment Success Page

Create `app/payment-success/page.tsx` :

```
export default function PaymentSuccessPage() {
  return (
    <main>
      <h1>Welcome to Kindred.</h1>
      <p>
        Your payment was successful. You now have full access to the Kindred
        AI Coaching platform.
      </p>
      <p>
        Check your email for your receipt and login instructions.
      </p>
      <a href="/app">Go to the App </a>
    </main>
  );
}
```

Section 6 — Square Webhook Registration

After deploying, register the webhook endpoint in the Square Developer Portal:

1. Go to [Square Developer Portal](#)
2. Open your application
3. Click **Webhooks** in the left sidebar
4. Click **Add endpoint**
5. Enter URL: `https://kindred-asterling-ai-coaching.com/api/square/webhook`
6. Select events to subscribe to:
 - `payment.completed`
 - `order.fulfillment.updated`
7. Copy the **Signature Key** and add it as `SQUARE_WEBHOOK_SIGNATURE_KEY` in Replit Secrets
8. Click **Save**

Section 7 — SEO & Metadata

Update `app/layout.tsx` (or the root metadata export) with:

```
export const metadata = {
  title: 'Kindred Asterling AI Coaching | Neuroscience-Based Recovery Support',
  description:
    'Kindred is an AI companion grounded in cognitive neuroscience, mental health research, and evidence-based recovery strategies. We provide personalized support for individuals seeking recovery from substance use and mental health challenges. Our AI-powered platform offers 24/7 assistance, guided by a team of experts, to help you navigate your journey towards healing and wellness.',
  openGraph: {
    title: 'Kindred Asterling AI Coaching',
    description:
      'Where neuroscience meets compassion. AI-powered recovery support built on peer-reviewed research and clinical expertise. Join our community of support today.',
    url: 'https://kindred-asterling-ai-coaching.com',
    type: 'website',
  },
};
```

Section 8 — Summary of Files to Create / Modify

File	Action	Notes
<code>app/page.tsx</code>	Modify	Replace/augment with full landing page content from Section 1A
<code>app/science/page.tsx</code>	Create	New public page — Section 1B

app/about/page.tsx	Create	New public page — Section 1C
app/pricing/page.tsx	Create	New public page — Section 1D
app/payment-success/page.tsx	Create	Section 5
app/api/square/checkout/route.ts	Create	Section 4A
app/api/square/webhook/route.ts	Create	Section 4B
components/CheckoutButton.tsx	Create	Section 4D
app/layout.tsx	Modify	Update nav (Section 2) + metadata (Section 7)
Replit Secrets	Add	All env vars from Section 3
Terminal	Run	pnpm add squareup in kindred-coach package

Important Notes for the Replit Agent

- **Do not modify any existing app modules** (/app/begin , /app/throughout , /app/close , etc.) — those are working and untouched
- **Do not change any existing auth logic** — the new public pages are pre-auth only
- **Match the existing design system** — use whatever component library, fonts, and color tokens are already in the project for all new pages
- **Square environment:** The code above uses Environment.Production . If testing, swap to Environment.Sandbox and use Square Sandbox credentials temporarily
- **Pricing values:** The pricing cards in Section 1D have placeholder price labels — replace with the actual prices from the Square catalog
- **Variation IDs vs Catalog Object IDs:** In the checkout route, catalogObjectId should be the **variation ID** (the child item under a product), not the parent item ID. Confirm this in your Square catalog.

Blueprint prepared by SkyClaw AI — June 2026

For use with the Kindred Asterling AI Coaching Replit project
